Mini Task Tracker

This is my Week 1, Day 2 mini project.

What it does

It is a menu based task tracker made in Python. It saves tasks in a JSON file, so the tasks are still there when I run the program again.

1. Add a task. It is saved as Pending.
2. View all tasks with Pending or Done.
3. Complete a task by its number.
4. Delete a task by its number.
5. Exit the program.

Each task is saved like this: {"title": "Read notes", "done": false}

Files in this repo

- mini_task_tracker.py - the program
- README.md - this file

tasks.json is made by the program when a task is saved. I did not upload it because it is made again when the program runs.

How to run it in Google Colab

1. Upload mini_task_tracker.py to Colab.
2. Run it.
3. Use the menu to add and view tasks.
4. Run it again in the same Colab runtime and choose View to check that the saved tasks are still there.

Note: files in Colab are temporary. To keep tasks.json, download it or save it to Google Drive.

How to run it on my computer

I need Python 3. Nothing else to install.

```
python mini_task_tracker.py
```

Sample run

```
--- TASK TRACKER ---
1. Add  2. View  3. Complete  4. Delete  5. Exit
Choice: 1
Task title: Read notes
Task added.
Choice: 2
1. Read notes [Pending]
Choice: 3
Task number: 1
Task completed.
Choice: 2
1. Read notes [Done]
Choice: 5
Goodbye!
```

How to add this to GitHub

1. Go to github.com and sign in.
2. Click New repository.
3. Name it mini-task-tracker and click Create repository.
4. On the new repo page, click Add file, then Upload files.
5. Upload mini_task_tracker.py and click Commit changes. Use this commit message: Add mini_task_tracker.py
6. Click Add file, then Upload files again.
7. Upload README.md and click Commit changes. Use this commit message: Add README.md
8. Now the repo has two commits. Copy the repo link from the address bar and submit that link.
